

8-ID-E Monochromator 2<sup>nd</sup> Crystal Commissioning: 2012.01.31 -

Four new motors for positioning crystal, 1 new smart motor.

xtl2th	8ide:m39	+/- 10 deg	Alio	control incident angle on crystal
xtl2z	8ide:m40	+/- 10 mm	Alio	control crystal height
xtl2x	8ide:m37	+/-8000 um	SmartACT	translate crystal along its surface normal (effectively, in and out of beam)
samrChi	8ide:m38	+/-2500 um	SmartACT	pushes/pulls an angular flexure element
xtl2chi	8ide:sm23	+/-1.0 deg	smart motor	converts smarChi to effective angle

Notes on limits and homing:

All these encoded motors need to be homed after cycling power.

Alio motors, xtal2th and xtal2z, have home switches at the extremes of range, and cannot reach the home position unless the soft limits are temporarily set larger than +/- 10.

SmartACT motors, xtal2x and smarChi, have home position at the center of travel, so they can be homed without changing the soft limits.

SmarChi has travel limited physically limited by the flexure element to +/- 2500 um. The smart motor xtl2chi, has soft limits +/- 1 degree, effectively limiting SmarChi to +/- 1200 um.
