Joe:

I put most of the native models and drawings I created via Inventor into Vault. I can certainly create step files for any of the files as well.

Mike

Subject: 8-ID-E drawings

Hi Altaf, Mike,

I think Mike told me he had a 3D model of our GISAXS beamline and all the drawings for the Nealey chamber in some depository of documentation....is it Xinc? In general I think it would be good if we knew how to access that. In particular, the development of the CSSI feature beamline for the Upgrade is progressing, and it would be good if we could share that with Jayson Anton. Ideally, we'll be able to continue to use the Nealey chamber on the new beamline, and maybe some other components as well.

(Maybe Jayson has already reached out to you. I have the book of drawings for the Nealey chamber Mike gave me, but it would still be good in principle for us to know how to access the drawings electronically).

Thank you,

Joe
