# Filling gaps in GIXSGUI

These are correct default values for the flat field, gap mask and bad pixel mask. You may need to check the path for the GIXSGUI distribution on your machine

The Base Image should be the UP file of the pair, the DN file is the Vertical Offset Image. Keep the offset value Y=-23. The gap filled data will have the same origin (Beam0) as the UP file.

Click Fill and then change the export format to double before exporting To File.

When viewing gap filled data, select Remove FF and Clear Mask!
